

LEMKEN – we think beyond

Only those with a deep understanding of agriculture are capable of producing agricultural machinery that meets all of the customer's requirements. We follow a vision. A vision of farmers operating profitably. A vision of shared success based on an active exchange between farmers, distributors and manufacturers. A vision of global food supply being sustainably supported by efficient engineering. This vision is what makes us the Agrovision Company.

A PART OF US: ORIGINAL ROTARY HARROW SPARE PARTS

**Perfect preparation: everything for efficient
seedbed preparation**

With original LEMKEN wear parts, you are always on the safe side, as each spare part made by LEMKEN is a part of us and designed to deliver optimal performance even under the most challenging conditions. LEMKEN's Zirkon 8 and Zirkon 12 rotary harrows produce intensive mixing and crumbling, and the forged, extremely wear-resistant knife tines ensure reliable seedbed preparation.

The image features a blue background at the top with white line drawings of harrow tines. Below this is a realistic cross-section of dark brown soil containing numerous light-colored clods and clumps. On the right side, there is a large white text block. At the bottom left, there is a table with four columns. At the bottom center, there are two blue 3D models of harrow tines.

CLODS AND CLUMPS ARE BEST CRUMBLLED WITH OUR HARDENED TINES.

LEMKEN tines for optimal soil structure:

Zirkon 8 rotary harrow

- screwed knife tines
- 300 mm length
- hard-faced version with three times the durability
- optional quick-change system with 340 mm knife tines

Zirkon 12 rotary harrow

- forged quick-change knife tines
- 340 mm long, 20 mm thick
- quick-change system for easy tine change without tools
- special 380 mm tines for intensive loosening in potato cultivation

When things take a bit longer:

maximal durability
due to a special
hardening process
that makes knife
tines particularly
resistant to wear
and breaking

In no time:

easy, quick tine
change

When things get tough:

also available as hard-
faced version or as
potato tines for deeper
cultivation

Fits like a glove:

perfectly precise
fit due to precise
forging processes
