Introduction to OLIVERS

Welcome to our Spring edition of the OLIVERS 2020 magazine, a publication to keep you informed of the latest offerings from OLIVER Agriculture.

This Spring edition is also the second OLIVERS magazine to be distributed to our new enlarged customer base across the South East of England and, we take this opportunity to thank all of our new customers and colleagues at the new OLIVERS Petworth and OLIVERS Winchester branches.

Following our successful acquisition of the Reading depot in 2015, the acquisitions of the Petworth and Winchester branches further extended our successful long term partnership with the CLAAS brand, providing customers with a high quality of service and support that is synonymous with the OLIVERS brand.

A key part of OLIVERS plan for continued growth is the coverage of an area from the South Coast to East Anglia, with five branches at Luton, Tingewick, Reading, Winchester and Petworth. One of OLIVERS core values is to offer an excellent range of modern machinery, supported by first class service. Across our area we offer machinery from many franchises and our expansion into Sussex and Hampshire means that we can now offer the additional following products to all our customers:

- Abbey tankers and feeders
- DAL-BO rolls and seedbed cultivators
- Maschio flail mowers, power harrows, ploughs & Gaspardo maize drills
- Grange Machinery low disturbance subsoilers
- Bunning manure spreaders
- Bredal spreaders
- KRM Bogballe fertiliser spreaders
- Richard Western trailers
- Samson slurry tankers
- Spread-a-Bale straw spreaders
- Spearhead FlexWing and Reach mowers
- Tanco wrappers

We are fast approaching the end of the traditional 'out of season' period for many of our franchises, so now is the time to capitalise on our special offers on new machinery, making use of the current Annual Investment Allowance from HMRC. Ordering in advance not only brings with it the financial benefit of increased discounts, but it ensures that delivery of machines can suit your requirements as well as guaranteeing that a machine can be ordered to your exact specification.

Across the following pages you will find details of OLIVERS out of season offers from our stock of machinery, as well as details of the wider range of products we offer. Our service and parts departments are always ready to support new and existing machinery and also offer attractive terms for organising servicing of machinery and ordering of spare parts in advance.

We look forward to discussing your requirements for the coming season. Please refer to page 2 for all your sales contacts. For your Service and Parts department contacts please turn to the back page.

David Jarman
Managing Director
Oliver Agriculture Ltd.

OLIVERS PROUDLY CELEBRATING OVER 70 YEARS

selling CLAAS combines since 1947

Since 1947 OLIVERS have been selling CLAAS combines as one of the first independent dealers appointed by the UK importer of the day, J Mann & Son. Founded by Archibald Thomas Oliver in 1823, the family maintained business has continued to grow, providing agricultural services for approaching 200 years.

OLIVERS

CLAAS

OLIVERS History

OLIVERS history with CLAAS can be traced back to 1947, when they were appointed as the first independent CLAAS dealer to supply combines by the importer at the time J Mann of Saxham. Over the following 73 years, this has proved to be an extremely successful and strong working relationship, culminating in recent years with an expanded CLAAS sales territory for OLIVERS, with the addition of the Reading, Winchester and Petworth depots.

OLIVERS have also made significant investment in supporting the CLAAS brand in their original sales area in the past five years. The opening of the new purpose built depot at Tingewick near Buckingham enables us to provide a much higher level of service with fantastic support facilities.

The history of the original A. T. Oliver & Sons business goes back even further to the 1800s when Archibald Thomas Oliver developed the family contract steam thrashing business, set up by his father and grandfather in the early part of that century. In the early 1900s A. T. Oliver & Son began supplying new farm machinery to local farmers in Bedfordshire. OLIVERS has always been associated with supplying high quality, market leading farm machinery. In their early years of trading, OLIVERS supplied brands such as Titan Tractors, Marshall track layers and also had a long-standing relationship with David Brown throughout much of the 1900s. Following the acquisition of David Brown by Case and the dissolution of the brand in the early 1980s, OLIVERS moved on to supplying Case IH tractors.

With the ambition of CLAAS to include a tractor range in their product line up, OLIVERS chose to stand by the CLAAS brand that had been so successful for them and, with their previous history of track layer sales, were able to be instrumental in helping CLAAS successfully introduce the CLAAS Challenger

range to the local market. Following several years of highly successful sales it was a credit to OLIVERS that, following the sale of the Challenger brand, A.T. Oliver was the only CLAAS dealer to remain appointed as a Challenger dealer, and this remained the case until the Challenger brand itself was disbanded in 2017.

The introduction of the full wheeled CLAAS tractor range in 2004 was a turning point for the OLIVERS business, which at that time supplied the JCB range of tractors and telehandlers as well as the Agco Challenger.

With full confidence in the new CLAAS tractor product following years of experience of working with CLAAS, and knowing how they strive to create the best products available, OLIVERS made the decision to create two separate companies to look after the wide range of products that A.T. Oliver now offered and the different markets that they now supported.

Oliver Agriculture Ltd was founded in 2008 when the decision was made to split into two new trading companies to give better focus and dedicated service support. Oliver Agriculture Ltd was formed to look after the CLAAS, Horsch & associated franchises, today covering an area from Cambridgeshire to the South Coast. At the same time our sister company Oliver Landpower Ltd was formed to look after the JCB, groundcare & buggy hire divisions covering an area to the North & West of London.

The focus of Oliver Agriculture on our key product brands such as CLAAS and Horsch has allowed us to pursue

the expansion of the business into new trading areas, whilst maintaining our traditional levels of support. A focus on the agricultural market also gives the company and its staff a better understanding of their customers desires and requirements.

The restructuring of the traditional family firm has allowed Oliver Agriculture to retain all the core values that existed over 190 years ago, the desire to offer a good product range and most importantly support this with first class service. We look forward to maintaining this for many years to come across our existing and new trading areas.

**We are recruiting
at all branches**

OLIVER AGRICULTURE LTD

OLIVERS are a long standing family business with nearly 200 years of experience, we have many employees with over 30 years service with the company.

In 1947 the business became the first independent CLAAS dealer in the UK, and has gone from strength to strength since that time. The last 4 years has seen significant growth resulting in an expanded sales territory and the addition of three new branches at Reading, Winchester and Petworth. As a result of this expansion OLIVERS has a number of exciting new career opportunities within the business and are looking to appoint new dedicated staff to fulfil the following roles:

EXPERIENCED SERVICE ENGINEERS / TECHNICIANS

Luton, Reading & Winchester

Due to the expansion of OLIVERS, we have exciting new opportunities for Experienced Service Engineers to join our growing team. You will play an important part in the servicing, maintenance and repair of CLAAS equipment to support our customers. A knowledge of combines, tractors and forage harvesters is desirable, however, full product training will be provided at the CLAAS Academy. More importantly, you will have the desire to

provide the highest level of customer satisfaction, an ability to learn new skills and the willingness to succeed. In return, we offer an excellent package including a competitive salary, contributory pension plan, laptop with the latest diagnostic software, mobile wifi connection, mobile phone a dedicated service van and extensive holidays. If you would like to move forward with a highly successful dealer allied to a global brand we would like to talk to you.

APPRENTICE PARTS ADVISORS

All Depots

You will play a vital part in supporting the full line of CLAAS machinery and other key franchise equipment. The ideal candidates will have excellent communication skills, be well organised and preferably have some agricultural machinery experience. The role will involve ordering and despatching parts to support both the customer base and engineers in the workshop. You will regularly liaise with

and speak to other departments as well as our franchise partners and the CLAAS UK headquarters. You will play a vital role in the company's success by ensuring customers receive the very best care and service. The successful candidates should possess excellent communication skills, be well organised, have some agricultural machinery experience, ideally in a Parts environment and be able to work both on your own initiative and as part of a team.

APPRENTICE SERVICE ENGINEERS

All Depots

We have exciting new opportunities for apprentice service engineers. You will work with the full range of CLAAS machinery alongside complimentary franchise equipment. A knowledge of combines, tractors and forage harvesters is desirable, although full training will be provided at the CLAAS Academy and our college

training partners. Most importantly you will have the desire to provide the highest level of workmanship, the ability to learn new skills and a willingness to succeed. In return you will share the rewards of working for a highly successful dealer allied to a global brand.

In return, for all of the above positions we offer an excellent remuneration package, including franchise training, a contributory pension plan and the stability of working for OLIVERS a forward thinking and expanding business, allied to a leading global agricultural manufacturers. If you would like to move forward with a successful long-standing independent dealership with career progression opportunities we would like to talk with you.

For all positions: Applications/enquiries to Anna Barnes, OLIVER Group HR Director by email at jobs@oliveragriculture.co.uk

All enquiries are treated in the strictest confidence. Oliver Agriculture Ltd are an equal opportunities employer. Deadline for completed applications is 30th April 2020.

TUCANO MONTANA

“The obvious option was the HYBRID TUCANO, which could provide the capacity without the width.”

Simon Walker, Somerset,
TUCANO 560 MONTANA, August 2019

Simon chose the 354hp, TUCANO 560 model, which still employs the APS threshing system. It is the smallest HYBRID, which uses a single, 4.2m long and 570mm diameter rotor for separation.

OLIVERS

CLAAS

OLIVERS and Martin Lishman

Oliver Agriculture Ltd are suppliers of Martin Lishman's Grain Quality and Storage products; some of the most popular include Pile-Dry Pedestals and Fans, FloorVent Systems, and Barn Owl Wireless automatic crop monitoring systems.

Pile-Dry Pedestals cool crops quickly to prevent insects, conserve quality, reduce waste and meet crop assurance requirements. When used with Martin Lishman Pile-Dry fans they create a fast, low volume crop cooling system.

Martin Lishman pedestals are valued for cooling, drying and conditioning all types of bulk stored crops, long or short term in flat stores, bins and silos; they are vertical and visible in the store making it easy to unload grain around them; they work on a sucking system which avoids condensation at the surface and the need for level filling plus they are simple to install and dismantle.

Martin Lishman pedestals and fans in a grain store

Martin Lishman Pedestal fans are high performance ventilation fans, delivering high airflows at high pressures. Target temperatures and moistures are reached quickly, maximising energy used and reducing storage costs. Importantly, the fans have an energy efficient IE3 motor, a hard-wearing aluminium body and are easy to access for maintenance.

A FloorVent cross section

The Martin Lishman FloorVent under-floor ventilation system is suitable for new floors, new stores, hopper bottomed bins and silos;

FloorVent allows for a multi-purpose store

it combines the benefits of Pedestals and Fans with the need to make store handling and filling easier. Units include a perforated Pedestal tube with a conical cap to deflect grain during filling. The tube connects to an under-floor duct via a base plate in a recess in the concrete floor. When the store is empty, a drain cover placed over the recess leaves the floor multi-purpose.

Barn Owl Wireless step by step

A FloorVent system is economical compared to traditional under-floor systems and allows easier filling as there is less chance that ducts will move. Hot air vents directly outside the building, avoiding the need for extraction fans and the system is low cost to install as only standard building materials are required.

Barn Owl Wireless automatic crop monitoring system gives the ability to reduce energy bills by at least 40% putting it at the top of every store manager's wish list. The system reduces crop cooling time and store management energy costs, ensuring crops remain in optimum condition.

Barn Owl Wireless is a modular system with no limit to the quantity of sensors. It sends temperature and humidity readings directly to the user's webpage and runs on a web and cloud-based system, so no software is required.

A Barn Owl Wireless four fan portable controller

Automatic wireless monitoring allows the user to remotely check temperature readings and manage stores online, ensure efficient use of cooling and drying fans, save time and money by avoiding unnecessary visits to remote stores and review captured data at any time to suit quality assurance needs.

Martin Lishman also offer a range of building extraction fans and louvres, compact sprayers, the Bourgault Tillage Tools VOS System, crop quality equipment, potato quality equipment and soil testing equipment. Please enquire for more information.

Martin Smith

Ware, Hertfordshire, AXION 920

Reliability and a high level of dealer support have been key reasons behind A R Smith & Sons gradually changing their tractor fleet to CLAAS over the last 6 years.

The Smiths are not ones to change brand regularly. Prior to CLAAS, they had relied on their previous premium tractor brand for 15 years, and another top-four brand for 25 years prior to that.

IMPRESSED WITH CLAAS

However, issues with reliability and support prompted Martin Smith to look around at other options and impressed with a CLAAS ARION run by his uncle and the support received from OLIVERS, he got in touch with them.

Three CLAAS AXION now form the mainstay of the tractor fleet on the 400ha farmed by Martin in partnership with his uncle and cousin. Leading the fleet is a 320hp AXION 920 bought in 2015, plus they have two AXION 800s – an 850 bought used with 5,000 hours on the clock that is a general purpose tractor and a new 830 that is mainly used for spraying and liquid fertiliser application, plus they run a smaller ARION 650.

HEAVY SOILS

“It could be argued that we are overpowered and that the AXION 920 is too big for the acreage,” says Martin. “But although we have a mix of soils, they are generally heavy. Buying the 920 was definitely the right decision as it gives us options and I would far rather be master of the situation rather than struggling, and to operate a tractor that’s well within its capabilities rather than operating on the limit.”

FUEL EFFICIENT

“Running costs for the AXION machines are good and they have proved just as fuel efficient as our previous tractors, but their great strength is that they are easy to drive and operate. Alongside that, the support offered by OLIVERS has been exceptional and that has been the main reason why we have gradually changed over to CLAAS.”

Main tasks for the larger AXION range from pulling the farm’s 7-furrow Lemken Euro 8 plough or Sumo cultivator, through to drilling using a Claydon V drill. “We end up doing a bit of everything, depending on the blackgrass burden,” states Martin.

For operator Mark Birtwistle, the transition from his previous tractor over to the AXION proved very straightforward, and for him the tractor’s ease of operation is one of its strengths.

EVERYTHING AT YOUR FINGERTIPS ON THE CMOTION CONTROL

“As a heavy cultivations tractor it’s very good and the FPT engine just keeps holding and pulling,” he says. “Having everything at your fingertips on the CMOTION control makes it very easy to set-up the F buttons. For most jobs I just set the Cruise Control and leave the tractor in automatic mode to look after itself. Over a long day the cab is a very nice place to be and the ride from the cab and front axle suspension is superb.”

“The AXION machines are just as fuel efficient as our previous tractors, but their great strength is that they are easy to operate.”

Martin Smith and
operator
Mark Birtwistle

TERRA TRAC-TOR

THE NEW AXION 900 TT

Two TERRA TRAC models available – the 445hp AXION 960 and the 355hp AXION 930.

Oscillating track system keeps ground contact to a minimum.

Tracks available in widths of 635mm, 735mm and 890mm providing 35% less ground pressure compared to standard tyres.

The only truly suspended track system available today, coupled with PROACTIV front suspension and 4 point cab suspension.

The AXION TERRA TRAC is the first half track unit to have a fully suspended track system, following 30 years of experience of rubber track development for the CLAAS LEXION. Combined with the front axle and 4-point cab suspension, the track system not only aids ground contact and reduces wheelslip, but gives the operator an unprecedented level of comfort compared to other tracked tractors.

A true game changer.

Contact OLIVERS today for more information.

claas.co.uk

OLIVERS High Horsepower Heritage

Focus on the OLIVERS association with high horsepower tractors

The Oliver name has been synonymous with the local agricultural community since the mid 1800s trading as A T Oliver & Sons, and to this day continues to supply and support the local agricultural industry.

For the 2020 edition of the OLIVERS Magazine we look back at OLIVERS history of supplying high horsepower tractors of their day, right through to our current high horsepower offerings of the CLAAS XERION and AXION 900 series tractors including the latest AXION 960 TERRA TRAC.

From the mid 1900s when tracklayer machines dominated the high horsepower stakes, A T Oliver & Sons were principal suppliers of the Marshall-Fowler range of tracked tractors. A long lasting relationship with the original Field Marshall tractors saw sales evolve to the Track Marshall as demand for higher horsepower machines grew. The working relationship with Track Marshall was reinvigorated once again in the mid 1980s with the introduction of the new series of tracked tractors.

Selling alongside the Track Marshall's during the 1980s A T Oliver & Sons were also successful dealers for the Mercedes agricultural range, selling the MB Trac models. The MB Trac is of particular historical interest as it was originally a CLAAS design that was sold to Mercedes who developed the model and hence would explain some its appearance similarities with the early CLAAS XERION tractors.

Equal-sized wheel, 4WD tractors have been a long established feature of the OLIVERS product offering, starting right back in the 1970s when A T Oliver & Sons were agents for the once popular Muir Hill range of tractors, prior to them taking on the Mercedes franchise in 1983.

This association with equal-sized wheel tractors continued into the 1990s with the introduction of the JCB Fastrac, a successful product still represented today by our sister company Oliver Landpower Ltd.

The association with the Mercedes MB Trac and JCB Fastrac over the years also presented OLIVERS with a suitable platform

to broaden their sprayer offering, with demount machines that could often compete with the self-propelled sprayers of their day. The long association with crop sprayers continues right up to the present day, and this experience reinforces OLIVERS as the specialist for the Horsch range of trailed and self-propelled sprayers, a product with which OLIVERS has been highly successful.

Returning to the theme of high horsepower machines, the late 1990s brought about great opportunity for OLIVERS, as their prospects of retaining a market leading share of the high horsepower market in their area grew enormously in 1997, with the introduction of the CLAAS Challenger. A hugely successful product from day one, OLIVERS retailed one of the first CLAAS Challengers in the UK and for the following five years sold numerous units across their trading area.

The CLAAS Challenger range evolved in 2002 to the Challenger MT range of tractors and due to OLIVERS superior experience in the sector, they retained the franchise to supply and service the new range of tractors over the next fourteen years.

With the advances in tyre technology of the past decade and the availability of fully integrated on-board tyre inflation systems, it is now widely accepted with lifetime running costs and versatility in mind, that wheels are often the primary choice for the high horsepower tractors.

Oliver Agriculture's current high horsepower CLAAS XERION, with large diameter equal-sized wheels, ranging from 462-530hp, and the CLAAS AXION 900, conventional wheeled tractors offering up to 445hp, gives us one of the widest wheeled product ranges available, with a model to suit all requirements. The AXION range is now enhanced with the innovative and versatile TERRA TRAC version offering up to 445 hp.

OLIVERS experience in the high horsepower tractor market including an extensive tractor range from CLAAS, enables us to continue to service our customers not only with a high horsepower requirement, but tractors to suit all applications, with the Oliver family committed to serving this market for many years to come.

J Speirs & Son

Luton, AXION 950, 2x 850 & 830

CLAAS AXION have been the mainstay of the tractor fleet run by J Speirs & Sons for the last 7 years, with a 410hp AXION 950 the latest addition which arrived in September to replace a tracked CLAAS Challenger 75E.

In addition to the latest AXION 950, the company also runs three 800 series models. Of these, the oldest is an AXION 850 which was one of the first to be bought back in 2010, plus there is another 2012 plate 850 and an 830 CMATIC bought last February.

WE KEEP COMING BACK FOR MORE

“We have been running AXION for a long time now and are obviously happy with them because we keep coming back for more,” says Jim Speirs. “The AXION is a good, all-round tractor that everyone like driving. It’s driver friendly, good in the field and never underpowered, so always pulls well. The cab suspension makes them very comfortable to operate and the drivers definitely appreciate that, you certainly notice the difference when you get onto something else.”

“Added to that there is the service and support that we receive from OLIVERS, backed up by the parts support that they get from CLAAS.”

FAR MORE FLEXIBILITY

The arrival of the new AXION 950 last autumn reflects a partial change from tracks back to tyres. “We still have a large tracked tractor for heavy cultivations, but replacing the Challenger with the similarly powered AXION 950 gives us far more flexibility and enables the AXION to carry out jobs that the Challenger

couldn’t do, for instance baling or even grain carting if necessary,” explains Jim. “We have also used it to pull our 6.0m trailed drill, which normally goes behind one of the 850s, but it performed extremely well and ISOBUS made it very simple to bring up the controls.”

HIGH DENSITY BALING

This flexibility is reflected in the fact that as with the Challenger, its main job in the autumn is to work down seedbeds using a 6.6m Cultipress, either on plough following 2nd wheats or after a Simba SLD, but it is also now used to drive the farm’s high density baler, baling both silage and straw. If necessary it will also be brought in to pull the farm’s 7-furrow on-land plough, which is usually used behind the younger AXION 850 but which the Challenger struggled with.

“While the AXION and the Challenger are similar power, the AXION has far more grip and there is no difference in compaction. Fuel consumption is better and because we can use the AXION for far more jobs during the year rather than being parked up, the running costs per hour will be far lower.”

CMATIC TRANSMISSION

“Personally I really like the CMATIC transmission on the AXION as it pulls away very smoothly. We do have a lot of steep hills, with some long pulls so the tractors are really tested, but the engines on the AXION hold on well.”

DEALER SUPPORT

“But also OLIVERS are so reliable and easy to deal with, which is very important to us.”

“We do have a lot of steep hills, with some long pulls so the tractors are really tested, but the engines on the AXION hold on well.”

Jim Spiers

UPGRADE & AUTOMATE YOUR DRYING CAPACITY

Keep pace with modern farming technology and stay one step ahead of the curve and the weather with an OPICO dryer!

CLAAS

*Finance for business purposes only. Subject to acceptance and affordability checks. Applicant must be 18 or over. Promotion valid until 31 May 2020. Available on new equipment only. Based on funding 50% of RRP. The finance product available under this promotion is Hire Purchase. First payment, full VAT and a documentation fee of £75.00 are all due on signing. An option-to purchase fee of £50.00 (including VAT) will be collected with the final payment. You will own the machine when all payments have been made. Alternative finance options are available, terms & conditions apply. Images are for illustrative purposes only. Finance provided by CLAAS Financial Services Limited, Northern Cross, Basing View, Basingstoke, RG21 4HL. Registered in England No: 5854271.

SUFFOLK TRAILER

LARGE CAPACITY, ROBUST AND DURABLE

Heavy duty monocoque tipping trailers with a world-wide reputation for strength and durability, the Suffolk Trailer is designed and engineered to maximise efficiency optimising the strength to weight ratio and enabling you to deliver full payloads with a low unladen weight.

Available in 11 to 24 tonne models with an impressive array of standard features and a wide choice of options, you can build the Suffolk trailer to your exact requirements. Suitable for grain, silage and general purpose haulage.

RICHARD WESTERN
PROVEN IN THE FIELD

FBS REAR DISCHARGE

VERSATILE SPREADER, HIGH APPLICATION

The wide-bodied FBS spreader is available with twin vertical beaters or horizontal beaters with spinning discs and is designed to handle all types of farmyard manures sludges and waste products. With a 2m wide body and large cubic capacity, the FBS is particularly suited to handling low density manures. The variable floor speed control ensures constant delivery at high application rates.

Available in 12 to 18 tonne models with tandem or tri-axes, the FBS spreader is suitable for farmyard manure, semi-solid, poultry litter, industrial sludges and waste products.

SRT STONE & RUBBLE TRAILER

HEAVY-DUTY TRAILERS FOR TOUGH JOBS

These heavy-duty trailers with reinforced 6mm sides and 8mm floor are ideal for moving stone and rubble. The strong body construction with extra floor bracing and heavy-duty undercarriage, prevents damage and protects against debris and foreign objects.

Available in 20 tonne model, all stone and rubble trailers are designed for use with high speed tractors and are fitted with commercial axles on 420mm x 180mm brakes.

Meet the new HORSCH Hybrid Farming System team

Combining the best practices of organic farming and conventional farming, HORSCH's new Hybrid Farming System provides a solution to weed control without glyphosate.

Four new products start HORSCH's new Hybrid Farming System. Combining the best practices of organic farming and conventional farming, this inventive and forward-looking system is designed to meet the needs of farmers looking for mechanical weed control yet retaining the high productivity of conventional farming. Ever-growing pressure on the reduction of chemicals in farming continues to force farmers to meet supply demands using more and more organic practices. The HORSCH Hybrid Farming System helps meet those demands.

Transformer VF inter-row hoeing tool

The Transformer VF is the basis of a new inter-row hoeing tool line in the new Hybrid Farming System. The fully integrated lateral sliding frame enables the Transformer VF to be extremely flexible with parallelogram-guided tools. Available in 6m to 12m working widths, it can be combined with many camera systems.

Finer LT for complete cutting tillage

The Finer LT enables shallow cutting of weeds, volunteer crops or catch crops. It can be an alternative to glyphosate with regards to fighting weeds. The ability to set the tine angle so the tines cut shallow and parallel to the ground is completely new.

Cura ST Hybrid Farming harrow

The new Cura ST harrow is one of the central solutions for HORSCH's Hybrid Farming system. It will be launched as a 3-point version with working widths ranging from 6m to 15m and features an extremely solid design and precise operation.

Cultro TC double knife roller

The Cultro TC is a double knife roller with low horsepower requirement, available in 3m and 12m working widths. Used in combination with other machines, the highly flexible Cultro TC provides excellent cutting in rape or silage maize stubble and in catch crops.

HORSCH *Passion in farming*

Sprayers, drills and cultivators for professional farmers

As farmers ourselves, we understand the needs of professional farmers. Farming is our passion.

We create innovative, award-winning technology that increases crop yields and reduces establishment costs by offering precision, performance and reliability.

Our broad cultivator range has something to suit all conditions and applications. Our impressive drill range has as grain and fertiliser models in all sectors with widths up to 12m.

All Leeb trailed and self-propelled sprayers feature BoomControl Pro, holding it rock steady at less than 30cm above the crop at speeds up to 30kph, even on hilly terrain.

Visit our website, your local **OLIVERS** branch or call 01733 667895.

HORSCH
horsch.com

New self-propelled sprayers

Leeb 6.300 PT and 8.300 PT

The new self-propelled Leeb PT sprayers have been developed to offer increased flexibility, comfort and precise application.

Two tank sizes are available, a 6,000-litre and 8,000-litre, with an increased ground clearance and a new ComfortDrive chassis concept that offers a new level of driving comfort. The unique and award-winning boom control system, BoomControl Pro, is now available in boom widths up to 42m and up to 42 sections.

The ComfortDrive chassis with a central frame and hydro-pneumatically spring-loaded individual wheel suspension is a completely new development. Active level regulation provides superb driving comfort on the road, in the field and on slopes. The wheel hub drive offers automatically load-dependent, controlled stepless drive and an anti-slip control.

The front cabin layout optimises weight distribution and the all-new cabin provides excellent visibility and space. The new ErgoControl armrest focuses on simple, safe and comfortable handling of all sprayer function.

The spacious cabin is built to the highest safety standards with Category 4 air filters cleaning the cabin air. A new 310hp Tier 5 engine meets the latest emission standards.

Active level regulation for superb driving comfort.

The all-new cabin offers excellent visibility and space.

SPEARHEAD LAUNCHES VFR CAPABILITY IN TWIGA CLASSIC RANGE

Spearhead Machinery's best-value TWIGA Classic hedge and verge cutters now include a model with variable forward reach (VFR) technology – traditionally restricted to their top-end mower series.

The TWIGA Classic VFR is a game-changer for farmers, contractors and local authorities. Tackling sizeable mowing and cutting jobs with ease, the brand-new VFR model enables the operator to move the arm forward and work within his peripheral field of vision, even when driving. This is a distinctive advantage for driver comfort - optimum visibility and a forward-facing stance can be maintained.

The TWIGA Classic VFR operates a 65hp hydraulic system, more potent than many of its competitors in the same price bracket. The Pilot Hydraulic Proportional Control System delivers fingertip control and precise manoeuvrability whilst in action. There are a multitude of attachments, too, including flail heads, cutter bars and saw heads.

A universal, rear mounted cutting machine, the TWIGA Classic range is well-known for great value, long-term service and robust build quality. The addition of VFR capability has raised the bar even further.

Comments Simon Gurney; Area Sales Manager at Spearhead: "Driver comfort has a direct impact on performance. If the driver can operate with increased ease, the job will get done better, safer and faster."

Spearhead first invented the VFR concept in the late 1990s, a design feature that has since been replicated across the industry.

Gurney adds, "We are delighted to now offer the TWIGA Classic VFR, opening up increasing visibility and comfort to a broader spectrum of reach mower operator."

Olivers will be running Twiga demo units throughout 2020. Should you wish to see any of the Twiga Series in action, or any of the other professional products offered by Spearhead Machinery Ltd please contact your local Olivers Area Sales Manager.

“ Driver comfort has a direct impact on performance. If the driver can operate with increased ease, the job will get done better, safer and faster. ”

OLIVERS and Spread-a-Bale

Spread-a-Bale®

- SAVE STRAW AND SAVE TIME
- ONLY ONE LOADER REQUIRED
- REDUCE DUST AND HEALTH RISK
- VERY LOW MAINTENANCE AND RELIABLE

Tel: 01244 394258 • sales@spread-a-bale.com
WWW.SPREAD-A-BALE.COM

Spread-a-Bale

Spread-a-bale provides all livestock farmers with a simple solution to one of the most laborious tasks – spreading bedding straw. Whilst other bale processors literally chop and blow the straw into the livestock pen using pneumatic forces, Spread-a-Bale's spreading rotors accelerate a mass of straw and throw it full width of the pen with minimal dust generation. One bale can be processed in less than 45 seconds.

Spread-a-Bale spreads both round and rectangular bales; it is truly self-loading from the stack. Only one tractor or materials handler is required. Attaching and detaching the spreader is very quick and simple with only one double acting hydraulic supply requiring no electrical connection.

The benefits

- Saves straw: longer straw makes for a longer lasting bed
- Our customers commonly report
 - ◇ up to 50% straw saving over manual spreading with square bales, up to 35% for round bales
 - ◇ up to 25% reduced requirement over other mechanical spreading systems
 - ◇ up to 25% saving of longer straw over shorter straw
- Saves time and labour: forget manual labour, one 700kg rectangular bale can be spread in 45 seconds – faster than any other spreaders, shredders, choppers and bale processors
- Reduces dust and subsequent health risks for both farmers, operators and their livestock: minimal dust reduces the risk of pneumonic conditions and infections and in turn reduces antibiotic usage, together with injuries from foreign object missiles
- Improves livestock welfare and overall performance: animals are kept cleaner and healthier; they have the best opportunity to reach their potential, including to optimise feed conversion rates
- Improves environment: the entire system has a much-reduced carbon footprint over any other mechanised system; reduced passes and equipment
- Improves business efficiency: lowers the system's overall costs and contributes to significantly improving farmers competitive advantage. Spread-a-Bale also has low depreciation and high resale value

Case study

Straw spreading machine, Spread-a-Bale has halved the straw bill and made savings sufficient for the system to pay for itself in less than one year according to the University of Liverpool Institute of Veterinary Science, Wood Park Farm.

Seeking to reduce the amount of straw bedding and subsequent costs whilst maintaining the high performance of the University's 220-cow herd in terms of low mastitis incidence and somatic cell counts, Wood Park Farm evaluated Spread-a-Bale in its straw bedded dry cow and youngstock accommodation.

Compared to its previous operations using a grab to shake out the straw, Spread-a-Bale proved to be more effective and efficient; the number of bales used was reduced by 50%, making savings sufficient to cover over 100% return on capital investment in under a 12-month period. At the same time, quality of the bed remained the same, and the low level of mastitis cases was maintained.

"I've used a number of straw bedding machines over more years than I care to remember and have always disliked the amount of dust produced during spreading and even less appreciated unblocking them on a regular basis," explains Wood Park Farm's farm manager, John Cameron.

"We have several straw yards with less than ideal designs, and have a high standard of bedding being a university farm which in turn means a significant amount of straw is used annually. The straw bill for 2018 was around £30,000 which is about twice the average spend for this size of farm based on Promar costings.

"Using Spread-a-Bale, we have halved our straw usage, which means that the machine will have paid for itself within 12 months. It's easy to use and rarely blocks, but its rotors and bed can be put in to reverse if it does, and it leaves a fluffy bed for the animals to nest in."

Spread-a-Bale®

“ Since we invested in Spread-a-Bale, we've made 50% savings on straw usage, which means that the machine will have paid for itself within 12 months. ”

John Cameron, farm manager; 220 cows
Wood Park Farm, The University of
Liverpool School of Veterinary Science

IOW SERVICED

Based near Newport, on the Isle of Wight, M.R Agri are the Island's only authorised OLIVERS CLAAS service dealers.

Established by Marcus Rickard in 2014, the business has continued to grow and working with Ryan Munt, who joined as a business partner in 2017, the team have dramatically increased the presence of the CLAAS brand on the Island.

With over 30 years of mechanical knowledge and expertise between them, Marcus and Ryan have built their business on an understanding of the importance of service to their customers. They pride themselves on their efficiency and reliability, and are supported in this by the fantastic parts service provided by CLAAS UK.

In addition to servicing, MR Agri offer parts and accessories sales, as well as sales of new and used machinery, mirroring the brands associated with **OLIVERS** and more.

To contact a member of the MR Agri team call us on **01983 640421** or email info@mrickardagri.co.uk

OLIVERS and MASCHIO

Maschio Front/Rear & Offset Flail Mowers

The Maschio Flail mower range is one of the largest available on the UK market with models and features to suit nearly all possible applications. Maschio have put to good use the 45 years of expertise, gained from building gearboxes and drive lines for rotary cultivators, in the design of their flail mower range. Build techniques and buying volumes ensure robust, reliable and competitively priced machines and wearing parts.

All Maschio flails ensure worked material is thoroughly cut and mulched, whether they are cutting long grass or twigs and branch, which is essential in speeding up breakdown and ultimately the nutrient value of the residue that is absorbed back into the soil.

Whilst a mechanical and/or hydraulic offset is available on most standard mounted machines the range also includes fully offset models for field/verge side and ditch mowing.

From 1m to a little over 6m, there is a Maschio flail mower to suit all requirements.

2018 excellent condition

Stock no.: 11011033

Plough set-up

When choosing a plough, Rob Immink at Maschio will take a farmer through several steps to identify the best option. Available horsepower and field size are two – influencing the size of the plough, followed by soil type. If you have stony or heavy clay soils you'll probably want automatic reset – other soils will get away with shear bolts.

Those with variable soil types may benefit from hydraulic width adjustment, while manual adjustment is suited to more uniform soils. Sticky soils work best with slatted boards, whereas whole boards are fine for other soil types. "If you're ploughing for potatoes you'll need a deep board, while cereals want a wider one."

"Most farmers nowadays are using ploughing to control grass weeds," he adds, "so are looking for complete inversion to buy the seeds. That will affect mouldboard design, helical for shallower working depths or cylindrical for deeper inversion – while skimmer choice depends on the residue; are you ploughing maize stalks or short barley stubble?"

"There are a lot of factors that determine what plough you need, so it's important to weigh up all the considerations."

Rob Immink

All prices exclude VAT and delivery, subject to availability.

SMART LOADING

Extended CLAAS SCORPION range

With up to 5,600kg capacity and 9.7m lift height, the extended SCORPION range offers DYNAMIC COOLING, SMART LOADING, SMART ROADING and multiple steering modes.
