

The CLAAS SCORPION 'Handling' the job well

There's nothing we don't like about the CLAAS SCORPION, we've had 8 of them since March 2012 when we bought our first 7030 and haven't looked back. We were originally running one CLAAS telehandler alongside another brand, but ended up swapping it in for another CLAAS machine and have ran 2 SCORPIONS together ever since.

One of the telehandlers can be feeding our 1350 milking cows as well as the youngstock, while the other is carrying out the other duties on the farm such as bedding cubicles or cleaning out loose housings - the jobs get split between the two SCORPIONS to try and even the hours out. These machines do around 3000 hours a year so they're certainly well able for the job.

We're currently running a 736 & 1033 - we prefer working with the 1033 purely because of the 10m reach rather than the 7m reach. It makes the machine a lot more versatile for work around the farm. The telehandlers are able to get in where we need them to get in, they're here to do a job and they get it done as and when we need it. All the staff get on with them as they're very user friendly.

The SCORPION was the first machine we ever bought from HAMBLYS and the backup has been second to none. If the telehandler has to go into the workshop, they get us a backup machine to replace it when needed. We haven't had anything go seriously wrong, but whenever something needs fixing HAMBLYS are here in no time. We have the 6000 hour extended warranty & service contract with each machine, and appreciate the fact we have a fixed running cost to work with.

Everything breaks down, but it's always reassuring to know we have HAMBLYS support.
